

CLOUD SERVICES EXPENSE MANAGER

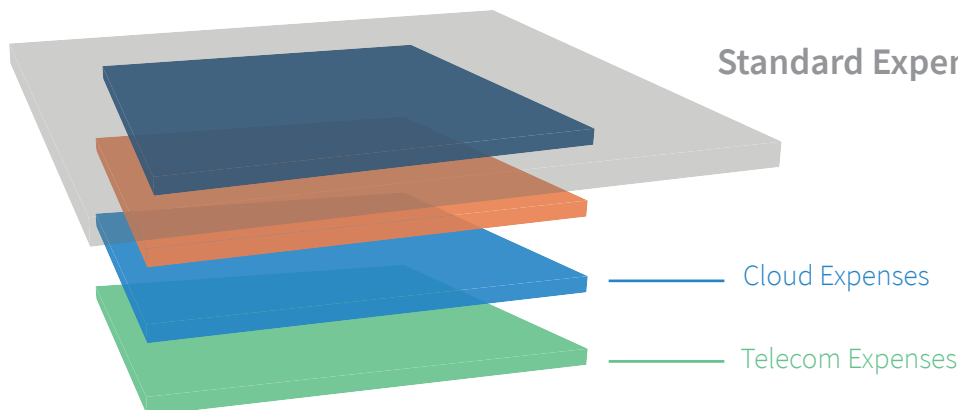

OPTIMIZE AND VALIDATE YOUR CLOUD INVENTORY AND COSTS WITH CONFIDENCE

Whether cloud expense management is your full-time, or “when-you-have-time”, responsibility, MDSL knows it can be difficult to fully understand and manage your company’s estate of cloud services. You might spend hours manually transcribing and typing data, normalizing from multiple systems, or debating with colleagues the actual cost of a project’s IT costs. You might also struggle to tie cloud spend to the various cost centers, general ledgers or specific projects.

At their simplest form, expenses are expenses. At MDSL, we have learned that by implementing standard processes for capturing, reporting and allocating for all spend categories, the organization wins. Our Cloud Services Expense Manager (CSEM), a cloud-based software product, allows you to manage spend for all cloud services whether Infrastructure as a Service (IaaS), Platform as a Service (PaaS) or Software as a Service (SaaS). We leverage our current Technology Expense Management (TEM) solution and functionality to process, allocate and report. It is a minimal touch solution enabled through vendor API integration that imports cost and usage reporting (both billed and unbilled) automatically on a daily basis. What you get in return is increased optimization and validation of your cloud inventory and costs, augmented with resource consumption visuals and actual ROI calculations, so you can improve your employees’ sense of ownership.

INCLUDES:

- Cloud Management Admin Portal
- Cloud Inventory Manager
- Cloud Contract Management
- Invoice Tracking and Trending
- Cloud Optimizations
- AP Batch File
- Cloud Vision Dashboard
